

SYED MOMIN ALI SHAH

Full Stack Developer

Scheme 33, Karachi, Pakistan | +92 304 2151667 | smshah.2003@gmail.com | smshah.netlify.app | linkedin.com/in/smsah121

PROFESSIONAL SUMMARY

Final-year BS Software Engineering student and Full Stack Developer focused on building secure, scalable web applications and enterprise-grade architectures. Proven experience in implementing multi-role dashboards, complex authentication mechanisms, and advanced payment pipelines, with practical project execution across emerging web technologies.

EDUCATION

Bachelor of Science in Software Engineering | Iqra University Main Campus (2023-Present)

EXPERIENCE

Full Stack Developer Intern (Remote) | Intern Intelligence (July 2025-Aug 2025)

- Independently designed and developed a role-based e-commerce platform using React.js, NestJS, and PostgreSQL.
- Delivered two development tasks end-to-end within deadlines, ensuring clean and maintainable code.

PROJECTS

Autonomous AI-Driven Blockchain-Based Degree Attestation & Verification Platform

- Engineered an autonomous degree attestation workflow integrating Google OAuth2 authentication and a Stripe-powered payment gateway, enabling secure student onboarding before AI-driven transcript processing and verification.
- Replaced manual verification using AI-powered OCR to validate student identity and academic eligibility, automatically approving, rejecting, or routing uncertain submissions to an administrative review queue.
- Automated secure certificate issuance by generating tamper-resistant PDF transcripts with SHA-256 cryptographic hashes and QR codes, then anchored approved credentials on the Ethereum Sepolia blockchain, enabling instant authenticity verification using either the certificate hash or QR code.

AI-Powered Credit Card Fraud Detection System

- Built a credit card fraud detection system that processes live transaction data through a NestJS backend, transforms it into ML-ready feature vectors, and evaluates it against the Kaggle Credit Card Fraud Detection dataset (284K+ transactions).
- Trained and deployed a machine learning classification model (Logistic Regression via Scikit-learn) on FastAPI endpoints for real-time transaction scoring, predictive analytics, and confidence scoring.

E-Commerce Platform

- Engineered a multi-role e-commerce application with secure JWT authentication and permission-based access, allowing admins to publish products with image uploads, monitor buyer activity, and update order statuses.
- Implemented customer-facing cart functionality with dual checkout options (Stripe online payment & Cash on Delivery), leveraging Stripe webhooks to notify the backend and sync order updates in real time.

Learning Management System (LMS)

- Designed a permission-based LMS enabling students to browse and register for courses, then view enrolled-course lectures alongside course-specific announcements.
- Equipped instructors with tools to create courses, upload lecture content, publish announcements, and monitor enrolled student rosters, while optimizing data synchronization through client-side caching

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JavaScript (ES6+), React.js, Redux Toolkit, RTK Query, Tailwind CSS, Framer Motion

Backend: NestJS, Node.js, TypeScript, FastAPI, Python, RESTful APIs, JWT Authentication, Role-Based Access Control (RBAC)

Web3 & AI: Solidity, Ethers.js, Smart Contract, Machine Learning (Scikit-learn, Logistic Regression), Tesseract OCR

Databases & Tools: PostgreSQL, TypeORM, GitHub, Render, Netlify, Neon, Cloudinary, Stripe API, Heroku, Azure, Vercel
